

East Windsor Cogeneration Expansion Project

Construction of Capital Power's East Windsor Expansion Project located next to its existing East Windsor Cogeneration Centre at 224 Cadillac Street is nearing completion. Commissioning (testing) of the unit is anticipated to begin in early February and commercial operation is expected in summer 2026. Once complete, the 100-megawatt peaking facility will provide dependable electricity when other generation sources (wind, solar, baseload generation) cannot meet demand.

The commissioning process involves a comprehensive series of tests to ensure the equipment, including the simple-cycle gas turbine, fans, fuel gas compressor, heat exchangers, generator and transformer operate safely, reliably and efficiently. The new gas turbine is expected to run for the first time in mid to late May subject to progress.

Over the next five months or so, you may occasionally hear increased noise, or unusual sounds at the site as we complete commissioning. These noises will be temporary and will not persist when the unit is commissioned and begins commercial operations.

We understand and recognize that construction and noise may be impactful. Capital Power apologizes for any disturbance as we commission the expansion project.

An aerial view of the expansion project site as it looked at the end of 2025. The project advanced significantly since ground was broken in February 2025 with the completion of underground infrastructure and placement of most major equipment for the power island, including the gas turbine and generator.

About us

Capital Power (TSX: CPX) is a growth-oriented North American power producer. We prioritize delivering reliable and affordable power, building lower-carbon power systems, and creating balanced energy solutions for our energy future.

Our portfolio consists of approximately 12 gigawatts (GW) of power generation at 32 facilities, plus battery energy storage across North America.
